

# Installation Instructions

## SAFETY CONSIDERATIONS

Installing, starting up, and servicing this equipment can be hazardous due to system pressures, electrical components, and equipment location.

Only trained, qualified installers and service mechanics should install, start up, and service this equipment.

Untrained personnel can perform basic maintenance functions, such as cleaning coils. All other operations should be performed by trained service personnel.

When working on the equipment, observe precautions in the literature, and on tags, stickers, and labels attached to the equipment.

- Follow all safety codes.
- Wear safety glasses and work gloves.
- Use care in handling, rigging, and setting bulky equipment.

|--|--|

**IMPORTANT:** This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with these instructions may cause radio interference. It has been tested and found to comply with the limits of a Class A computing device as defined by FCC (Federal Communications Commission, U.S.A.) regulations, Subpart J of Part 15, which are designed to provide reasonable protection against such interference when operated in a commercial environment.

- ELECTRICAL
- LOW-AMBIENT OPERATION
- HOT GAS BYPASS
- MISCELLANEOUS ACCESSORIES

## Step 8 — Refrigerant Circuit .....

- LEAK TESTING
- DEHYDRATION
- REFRIGERANT CHARGE

## INTRODUCTION

These instructions cover installation of 30GTN, GTR, GUN, GUR040-420 liquid chillers with electronic controls and units with factory-installed options (FIOPs).

**NOTE:** Unit sizes 230-420 are modular units which are shipped in separate sections as modules A and B. Installation directions specific to these units are noted in these instructions. For modules 230B-315B, follow all general instructions as noted for unit sizes 080-110. For **all** remaining modules, follow instructions for unit sizes 130-210. See Table 1 for a listing of unit sizes and modular combinations.

Inspect the unit upon arrival for damage. If damage is found, file a claim right away with the shipping company. When considering location for the unit, be sure to consult National Electrical Code (NEC, U.S.A.) and local code requirements. Allow sufficient space for airflow, wiring, piping, and service. See Fig. 1-13. Be sure surface beneath the unit is level, and is capable of supporting the operating weight of the unit. See Fig. 14-17 and Tables 2A-3B for unit mounting and operating weights.

**NOTE:** To facilitate refrigerant vent piping, unit sizes 130-210, 230A-315A, and 330A/B-420A/B will have fusible plugs with 3/8-in. SAE (Society of Automotive Engineers, U.S.A.) flares if required by local codes.

## INSTALLATION

**Step 1 — Rig and Place the Unit** — These units are designed for overhead rigging and *it is important that this method be used.* Holes are provided in frame base channels, marked for rigging (see rigging label on unit). It is recommended that field-supplied 2-in. Schedule 40 steel pipes be passed through these holes, extending beyond frame enough to attach cables or chains on both sides for 040-110 and 230B-315B units. All other units come with 6 lifting lugs. Use spreader bars to keep cables or chains clear of unit sides. As further protection for the coil faces, plywood sheets may be placed against sides of unit, behind cables or chains. Run cables or chains to a central suspension point so that angle from horizontal is not less than 45 degrees. Raise and set unit down carefully. See Fig. 14-17 for rigging centers of gravity.

**Table 1 — Unit Sizes and Modular Combinations**

| UNIT MODEL<br>30GTN,GTR (R-22)<br>30GUN,GUR (R-134a) | NOMINAL TONS |        | SECTION A<br>30GTN,GTR,GUN,GUR | SECTION B<br>30GTN,GTR,GUN,GUR |
|--|--------------|--------|--------------------------------|--------------------------------|
|  | R-22         | R-134a |                                |                                |
| 040  | 40           | 25     | —                              | —                              |
| 045  | 45           | 28     | —                              | —                              |

| 230  | 220          | 155    | 150                            | 080                            |
| 245  | 230          | 160    | 150                            | 090                            |
| 255  | 240          | 170    | 150                            | 100                            |
| 270  | 260          | 180    | 170                            | 100                            |
| 290  | 280          | 195    | 190                            | 110                            |
| 315  | 300          | 215    | 210                            | 110                            |
| 330  | 325          | 220    | 170                            | 170                            |
| 360  | 350          | 240    | 190                            | 190/170*                       |
| 390  | 380          | 260    | 210                            | 190                            |
| 420  | 400          | 280    | 210                            | 210                            |

\*60 Hz units/50 Hz units.

**⚠ CAUTION**

1. Do not use forklift trucks on these units.
2. Modular (230-420) units **MUST** be rigged and placed as separate sections.

For shipping, some domestic units and all export units are mounted on a wooden skid under entire base of unit. Skid can be removed before unit is moved to installation site. *Lift the unit from above to remove skid.* See Fig. 14-17 for rigging centers of gravity. On export units, the top skid can be used as the spreader bars. If the unit is shipped with coil protection, it must be removed before start-up. The shipping bag for export units must be removed before start-up. On export units with a full crate, the crate sides must be removed to aid in rigging.

If overhead rigging is not available, the unit can be moved on rollers or dragged. When unit is moved on rollers, the unit skid, if equipped, must be removed. To lift the unit, use jacks at the rigging points. Use a minimum of 3 rollers to distribute the load. If the unit is to be dragged, lift the unit as described above, and place unit on a pad. *Apply moving force to the pad, and not the unit.* When in its final location, raise the unit and remove the pad.

Locate the unit so that the condenser airflow is unrestricted both above and on the sides of the unit. See Fig. 1-13 for required clearances. Provide ample room for servicing and removing cooler, depending upon unit location. The unit may be mounted on a level pad directly on the base rails or on a raised perimeter rail around the unit. If unit is mounted on a raised perimeter rail, fasten the unit to the rail using the mounting holes provided (sizes 080-420). For all units, ensure placement area is strong enough to support unit operating weight. Bolt the unit securely to pad or rails. If vibration isolators (field-supplied) are required for a particular installation, refer to unit weight distribution in Fig. 14-17 to aid in the proper selection of isolators. Do NOT mount directly on spring isolators.

NOTE: Once the unit is in place, check to be sure unit is level so that oil will equalize properly.

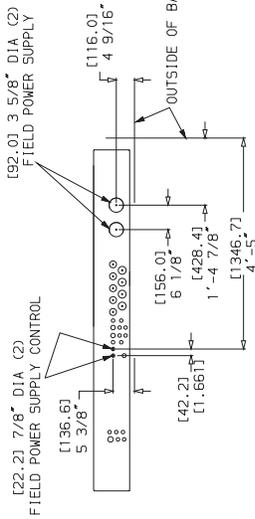

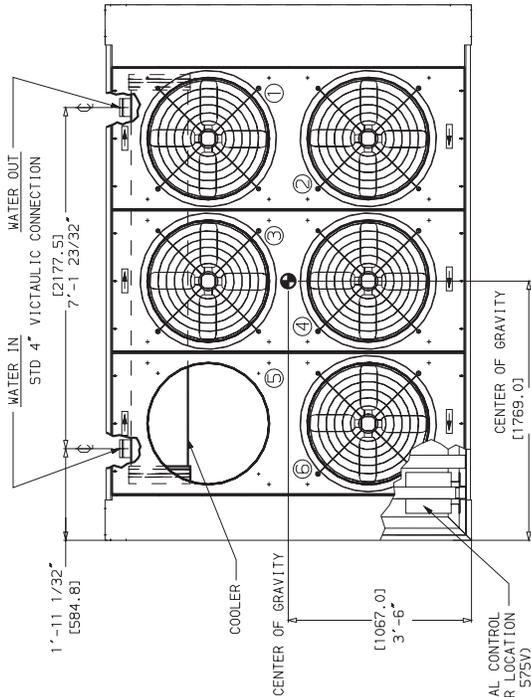

**IMPORTANT:** When placing unit modules for unit sizes 330-420, either end of module A can be placed next to either end of module B. When placing unit modules for unit sizes 230-315, make sure modules are placed to permit access to the control box located in module B.

*Instructions continued on page 40.*

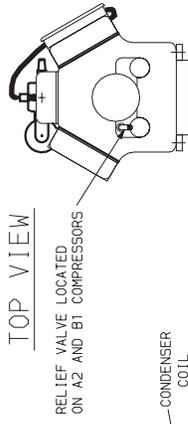

- NOTES:**
1. Dimensions in [ ] are in mm.
  2. Unit must have clearances for airflow as follows:  
Top — [1524 mm] 5 ft  
Sides — [1829 mm] 6 ft
  3. Mounting holes may be used to mount unit to concrete pad. They are not recommended for spring isolator location.
  4. If spring isolators are used, a perimeter support channel between the unit and the isolators is recommended.
  5. When unit has non-fused disconnect option, power side door opens in opposite direction. Non-fused disconnect option mounted in control box on 380, 460, 575 v (60 Hz) and 380/415 v (50 Hz). For 208/230 v (60 Hz), non-fused disconnect mounted underneath control box.
  6. 30GTR, GTR, GUN, GUR080 is also Module B for 30GTR, GTR, GUN, GUR230.

**LEGEND**

Cu-AI — Copper Tubing — Aluminum Fins Condenser Coil  
 Cu-Cu — Copper Tubing — Copper Fins Condenser Coil  
 OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.

†See Controls, Operation and Troubleshooting book for recommended oil.

\*\*Based on rated external static pressure of 0.4 or 1.0 in. wg as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

**LEGEND**

- Cu-AI — Copper Tubing — Aluminum Fins Condenser Coil
- Cu-Cu — Copper Tubing — Copper Fins Condenser Coil
- OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.

†See Controls, Operation and Troubleshooting book for recommended oil.

\*\*Based on rated external static pressure of 0.4 or 1.0 in. wg as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

Cu-AI — Copper Tubing — Aluminum Fins Condenser Coil  
 Cu-Cu — Copper Tubing — Copper Fins Condenser Coil  
 OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.

†See Controls, Operation and Troubleshooting book for recommended oil.

\*\*Based on rated external static pressure of 0.4 or 1.0 in. wg as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

Cu-AI — Copper Tubing — Aluminum Fins Condenser Coil  
 Cu-Cu — Copper Tubing — Copper Fins Condenser Coil  
 OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.

†See Controls, Operation and Troubleshooting book for recommended oil.

\*\*Based on rated external static pressure of 0.4 or 1.0 in. wg as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

**LEGEND**

- Cu-AI — Copper Tubing — Aluminum Fins Condenser Coil
- Cu-Cu — Copper Tubing — Copper Fins Condenser Coil
- OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.

†See Controls, Operation and Troubleshooting book for recommended oil.

\*\*Based on rated external static pressure of 0.4 or 1.0 in. wg as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

\*06E250 compressors have 4 cylinders; all others have 6.

†See Controls, Operation and Troubleshooting book for recommended oil.

\*\*Based on rated external static pressure of 100 Pa or 250 Pa as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

**LEGEND**

Cu-Al — Copper Tubing — Aluminum Fins Condenser Coil  
 Cu-Cu — Copper Tubing — Copper Fins Condenser Coil  
 OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.  
 †See Controls, Operation and Troubleshooting book for recommended oil.  
 \*\*Based on rated external static pressure of 100 Pa or 250 Pa as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

- Cu-Al — Copper Tubing — Aluminum Fins Condenser Coil
- Cu-Cu — Copper Tubing — Copper Fins Condenser Coil
- OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.  
 †See Controls, Operation and Troubleshooting book for recommended oil.  
 \*\*Based on rated external static pressure of 100 Pa or 250 Pa as appropriate.  
 NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

**LEGEND**

- Cu-AI — Copper Tubing — Aluminum Fins Condenser Coil
- Cu-Cu — Copper Tubing — Copper Fins Condenser Coil
- OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.

†See Controls, Operation and Troubleshooting book for recommended oil.

\*\*Based on rated external static pressure of 100 Pa or 250 Pa as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

**Cu-Al** — Copper Tubing — Aluminum Fins Condenser Coil  
**Cu-Cu** — Copper Tubing — Copper Fins Condenser Coil  
**OD** — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.

†See Controls, Operation and Troubleshooting book for recommended oil.

\*\*Based on rated external static pressure of 0.4 or 1.0 in. wg as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

**LEGEND**

- Cu-AI — Copper Tubing — Aluminum Fins Condenser Coil
- Cu-Cu — Copper Tubing — Copper Fins Condenser Coil
- OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.

†See Controls, Operation and Troubleshooting book for recommended oil.

\*\*Based on rated external static pressure of 0.4 or 1.0 in. wg as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

**LEGEND**

Cu-Al — Copper Tubing — Aluminum Fins Condenser Coil  
 Cu-Cu — Copper Tubing — Copper Fins Condenser Coil  
 OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.  
 †See Controls, Operation and Troubleshooting book for recommended oil.  
 \*\*Based on rated external static pressure of 0.4 or 1.0 in. wg as appropriate.  
 NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

**Cu-Cu** — Copper Tubing — Copper Fins Condenser Coil  
**OD** — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.  
 †See Controls, Operation and Troubleshooting book for recommended oil.  
 ‡Based on rated external static pressure of 100 Pa or 250 Pa as appropriate.  
 NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

\*06E250 compressors have 4 cylinders; all others have 6.  
 †See Controls, Operation and Troubleshooting book for recommended oil.  
 ‡Based on rated external static pressure of 100 Pa or 250 Pa as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

**LEGEND**

- Cu-Al — Copper Tubing — Aluminum Fins Condenser Coil
- Cu-Cu — Copper Tubing — Copper Fins Condenser Coil
- OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.

†See Controls, Operation and Troubleshooting book for recommended oil.

‡Based on rated external static pressure of 100 Pa or 250 Pa as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

\*06E250 compressors have 4 cylinders; all others have 6.  
 †See Controls, Operation and Troubleshooting book for recommended oil.  
 ‡Based on rated external static pressure of 100 Pa or 250 Pa as appropriate.

NOTE: Facing the compressors, Circuit A is on the right and Circuit B is on the left.

- OD — Outside Diameter

\*06E250 compressors have 4 cylinders; all others have 6.  
 †See Controls, Operation and Troubleshooting book for recommended oil.  
 ‡Based on rated external static pressure of 100 Pa or 250 Pa as appropriate.  
 NOTE: Facing the compressors. Circuit A is on the right and Circuit B is on the left.

## Step 2 — Join Modules A and B (230-420 Units Only)

If accessory trim kit has been purchased to join the modules together, install it now. Refer to accessory installation instructions for installation details.

**Step 3 — Check Compressor Mounting** — All compressors for size 040-070 units are mounted on pans and are held down by 4 bolts during shipment. After the unit is installed, loosen each of these bolts until flat washer can be moved with finger pressure. Compressors are mounted on rails for size 080-420 units. Each rail is mounted on springs (one at each end, and one between each compressor) when applicable. For shipping, the rails are secured to the frame base at each support. Before start-up, loosen the hold-down bolts so that the compressor rails float freely. See Fig. 18-21 for views of compressor mounting.

### ⚠ CAUTION

Do not remove angle brace spanning the tops of the compressors (if installed) on size 080-420 units. Removal of angle brace may result in line breakage.

## Step 4 — Cooler Fluid and Drain Piping Connections

When facing cooler side of unit, inlet (return) fluid connection is on the right. It is required that a screen strainer with a minimum size of 20 mesh be installed ahead of the cooler inlet to prevent debris from damaging internal tubes of cooler. Outlet (supply) fluid connection is on the left. The cooler has fluid-side Victaulic-type connections (follow connection directions as provided by the coupling manufacturer). If compressor and cooler grilles have been added, holes must be cut in grilles for field piping and insulation.

**IMPORTANT:** Installation of a cooler flow switch is strongly recommended to prevent potential system damage due to loss of fluid flow. Connect flow switch to TB5-1 and TB5-2.

**NOTE:** For 130-210 and associated modular units (see Table 1), be sure that cooler piping does not interfere with the electrical connections.

Although cooler has an air vent, it is recommended that field-supplied air vents be installed in system to facilitate servicing. Field-supplied shut-off valves should also be installed to facilitate servicing and flow balancing. Locate valves in return and supply cooler fluid lines as close to the chiller as possible. Locate air vents at highest point of the cooler fluid system.

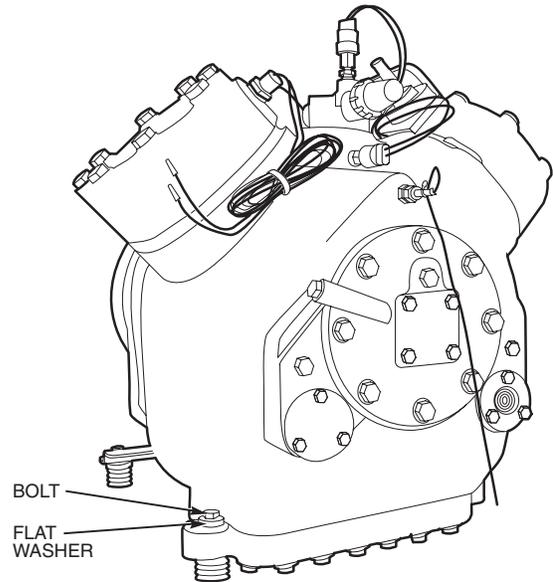

**IMPORTANT:** Before starting unit, be sure all of the air has been purged from the system.

Upon completion of the field piping installation, in areas where the piping is exposed to 32 F (0° C) or lower ambient temperatures, freeze-up protection is recommended using inhibited ethylene glycol or other suitable corrosion-inhibited anti-freeze solution and electric heater tapes. Heater tapes should have a rating for area ambient temperatures and should be covered with a suitable thickness of closed-cell insulation. Route power for the heater tapes from a separate fused disconnect. Mount the disconnect within sight from the unit per NEC or local codes. Label disconnect as heater tape power source with warning that power must not be turned off except when servicing the unit.

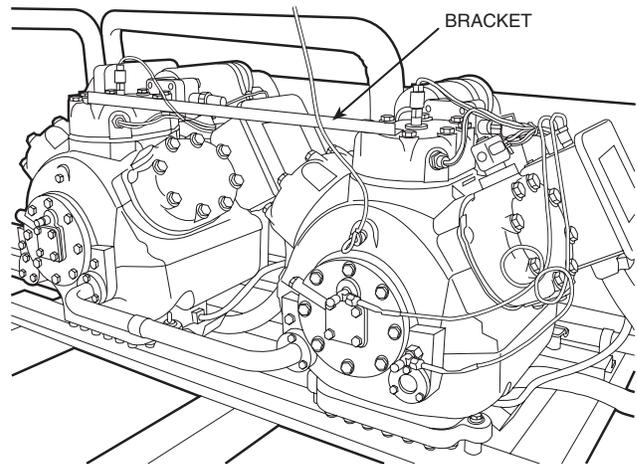

**IMPORTANT:** Glycol anti-freeze solutions are highly recommended since heater tapes provide no protection in the event of a power failure.

A drain connection is located at leaving fluid (supply) end of cooler. See Fig. 1-13 for connection location.

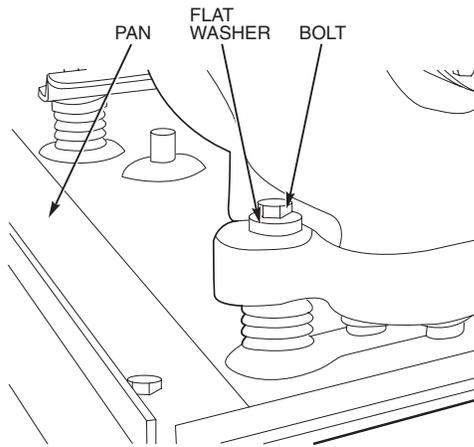

**PREPARATION FOR YEAR-ROUND OPERATION** — If unit is to operate all year, add sufficient inhibited ethylene glycol or other suitable corrosion-inhibited anti-freeze solution to the cooler fluid to prevent freeze-up under cold operating conditions. Consult local water authority on characteristics of area water and a recommended inhibitor for the cooler fluid loop.

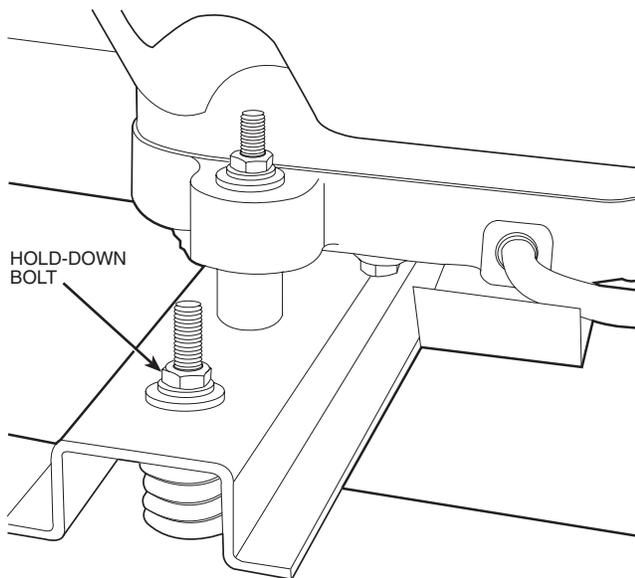

**Fig. 18 — Compressor Mounting View; Unit Sizes 040-070**

**Fig. 19 — Compressor Mounting View; Unit Sizes 080-420**

**Fig. 20 — Compressor Mounting Bolts; Unit Sizes 040-070**

**Fig. 21 — Compressor Mounting Bolts; Unit Sizes 080-420**

**PREPARATION FOR WINTER SHUTDOWN** — At end of cooling season:

1. If the unit has optional heater tapes on the cooler and the cooler will not be drained, do not shut off control power disconnect during off-season shutdown. If the unit has optional heater tapes on the cooler and the cooler will be drained, remove FU1 and shut off control power during off-season shutdown.

**⚠ CAUTION**

Failure to remove control power before draining heater-equipped coolers can result in heater tape and insulation damage.

2. Drain the fluid from the system.
3. Replace the drain plug and add 2 gallons (8 liters) (040-110 and associated modular units), 3 gallons (11.4 liters) (130-190 and associated modular units), or 4 gallons (15.1 liters) (210 and associated modular units) of inhibited ethylene glycol or other suitable corrosion-inhibited anti-freeze solution to the cooler to prevent freezing of

any remaining water in system. Antifreeze can be added through the vent on top of cooler.

4. Open one of the thermistor connections to allow air to escape the vessel and the anti-freeze to enter.
5. At the beginning of the next cooling season, refill cooler, add recommended inhibitor, and replace FU1 (if removed).

**Step 5 — Make Electrical Connections** — The electrical characteristics of the available power supply must agree with the unit nameplate rating. Supply voltage must be within the limits shown. The control box is divided into field power side on the right, and control power supply on the left (when facing control box) for 040-110 and associated modular units (see Table 1). For 130-210 and associated modular units (see Table 1), the power box is located on the cooler side of the unit, and the control box is located on the compressor side.

**FIELD POWER CONNECTIONS** (See Fig. 22-24) — All power wiring must comply with applicable local and national codes. Install field-supplied, branch circuit fused disconnect(s) of a type that can be locked off or open. Disconnect(s) must be located within sight from and readily accessible from unit in compliance with NEC Article 440-14. See Tables 4A-7 for unit electrical data.

**IMPORTANT:** The 30GTN,GTR,GUN,GUR040-420 units have a factory-installed option for a non-fused disconnect for power and control entry. If the unit is equipped with this option, all field wiring should be to the non-fused disconnect rather than the terminal blocks.

**30GTN,GTR,GUN,GUR040-110 and 230B-315B Units** — All field power enters the unit through the control box at the left end when facing the compressors. An access hole is under the control box. All units have a single location for power connection to simplify the field power wiring (except size 050-070, 208/230 v units). Maximum wire size that the unit terminal block will accept is 500 kcmil. Unit may use copper, copper-clad aluminum, or aluminum conductors at all voltages, except unit sizes 110, 290B, and 315B 380/415-3-50 part wind units. These units require copper conductors.

For 208/230-3-60 units (sizes 050-110 and associated modules) 6 parallel conductors are required.

**30GTN,GTR,GUN,GUR130-210, 230A-315A, and 330-420 Units** — The field power wiring enters the unit through the left side of the cooler side power box. The control power enters the control box on the compressor side of the unit.

**NOTE:** If optional non-fused disconnect is installed, power wiring must enter through center panel of unit (disconnect location).

**IMPORTANT:** Do not obstruct the field cooler connections when installing field power into the power box. Use 90-degree liquid-tight conduit fittings to connect field power to the unit and avoid the cooler piping area.

All units have a single location for power connection (one per module on 230-420 units) to simplify field power wiring. The maximum acceptable wire size for the terminal block is 500 kcmil. Copper, copper-clad aluminum, or aluminum conductors are acceptable for all units except unit size 210, 315A, 390A, and 420A/B 208/230-3-60 units. These units require copper conductors. For 208/230-3-60 units, 9 parallel conductors are required. All other voltages require 6 parallel conductors.

**FIELD CONTROL POWER CONNECTIONS** (See Fig. 22-24) — *For 208/230-, 460- and 575-3-60 units:* If the control transformer (FIOP or Accessory) is not used, provide a 115-1-60 power source for the control circuit, through a field-supplied fused disconnect (per NEC). This conductor must be copper only. Control power enters the control box through a 7/8-in. (22.2-mm) conduit connection located on the right side of the control section.

*For 30GTN, GTR, GUN, GUR040-110 and 230B-315B units with 380-3-60 or 380/415-3-50 power:* Control circuit voltage is taken from the line voltage, therefore, no additional power supply is required. If a separate power source is required, follow these instructions and disconnect the wires between the control and power terminal blocks.

*For 30GTN, GTR, GUN, GUR130-210, 230A-315A, and 330A/B-420A/B units with 380-3-60 and 380/415-3-50 power:* Control voltage is tapped from line to neutral. No additional power supply is required. If a separate power source is required, follow these instructions and disconnect the wires between the control and power terminal blocks.

Units with a power supply of 380-3-60 have 230-1-60 control circuit power, which is taken from the unit's power supply voltage. Units with a power supply of 380/415-3-50 have 230-1-50 control circuit power, which is also taken from the unit's power supply voltage. For control circuit current draw, see Table 5.

*All Units:* Control circuit power draw includes the compressor crankcase heaters at 180 watts each, the 2 (040-050), 4 (060,070) or 8 (080-420) cooler heaters (if equipped) at 210 watts each.

### **⚠ CAUTION**

Crankcase heaters and cooler heaters are all wired into the control circuit ahead of the control circuit switch. Therefore, they are always active even if the control circuit switch is off.

An interlock circuit for external safeties, such as the chilled fluid flow switch (CWFS) and chilled fluid pump interlock (CWPI) is provided between terminals TB5-1 and TB5-2 for field use. To use this circuit, install the switch contacts between these two points. Remote on-off contacts should be installed between TB5-13 and TB5-14. To use this circuit, install the switch contacts between these two points.

**COMFORTLINK™ COMMUNICATION WIRING** — Conductors and drain wire must be 20 AWG (American Wire Gage) minimum stranded, tinned copper. Individual conductors must be insulated with PVC, PVC/nylon, vinyl, Teflon, or

polyethylene. An aluminum/polyester 100% foil shield and an outer jacket of PVC, PVC/nylon, chrome vinyl, or Teflon with a minimum operating temperature range of -20 C to 60 C is required. Wire manufactured by Alpha (2413 or 5463), American (A22503), Belden (8772), or Columbia (02525) meets the above mentioned requirements. (See Fig. 25.)

### NOTES:

1. Factory wiring is in accordance with NEC (U.S.A.). Field modifications or additions must be in compliance with all applicable codes.
2. Wiring for main field power supply must be rated 75° C minimum. Use copper, copper-clad aluminum, or aluminum conductors for all units, except use copper conductors only for the following units: 30GTN, GTR, GUN, GUR110, 290B, 315B 380/415-v part-wind start units; 30GTN, GTR, GUN, GUR210, 315A, 390A, 420A/B 208/230-volts across-the-line and part-wind units.
3. Power for control circuit should be supplied from a separate source through a field-supplied fused disconnect. See Table 5 for required amp value for disconnect. Connect control circuit power to terminals 1 and 2 of TB4. Connect neutral side of supply to terminal 2 of TB4. Control circuit conductors for all units must be copper only.
4. Terminals 13 and 14 of TB5 are for field connection for remote on-off control. The contacts must be rated for dry circuit application capable of reliably switching 24 vac, 50 mA load.
5. The maximum load allowed for the remote alarm and cooler pump relay circuit is 75 va sealed, 360 va inrush at 115- or 230-v, depending on model.
6. Dimensions in [ ] are millimeters.
7. Make appropriate connections to TB6 as shown for energy management board options. The contacts for Demand Limit and Ice Done options must be rated for dry circuit application capable of handling a 24-vac load up to 50 mA.

See legend and notes on page 68.

## LEGEND AND NOTES FOR TABLES 4A-7

### LEGEND

|                 |  |
|-----------------|--|
| <b>FLA</b>      | — Full Load Amps (Fan Motors)  |
| <b>ICF</b>      | — Maximum Instantaneous Current Flow during starting (the point in the starting sequence where the sum of the LRA for the starting compressor, plus the total RLA for all running compressors, plus the total FLA for all running fan motors is maximum) |
| <b>LRA</b>      | — Locked Rotor Amps  |
| <b>MCA</b>      | — Minimum Circuit Amps (for wire sizing) — complies with NEC Section 430-24  |
| <b>MOCP</b>     | — Maximum Overcurrent Protective Device Amps   |
| <b>NEC</b>      | — National Electrical Code, U.S.A.   |
| <b>PW</b>       | — Part Wind Start  |
| <b>Rec Fuse</b> | — Recommended dual-element fuse amps: 150% of largest size compressor RLA plus 100% of sum of remaining compressor RLAs. Size up to the next larger fuse size.   |
| <b>RLA</b>      | — Rated Load Amps (Compressors)  |
| <b>XL</b>       | — Across-the-Line Start  |

\*Units are suitable for use on electrical systems where voltage supplied to the unit terminals is not below or above the listed minimum and maximum limits. Maximum allowable phase imbalance is: voltage, 2%; amps 10%.

#### NOTES:

1. All units/modules have single point primary power connection. (Each unit/module requires its own power supply.) Main power must be supplied from a field-supplied disconnect.
2. The unit control circuit power (115 v, single-phase for 208/230-, 460-, and 575-v units; 230 v, single-phase for all other voltages) must be supplied from a separate source through a field-supplied disconnect. The control circuit transformer accessory may be applied to power from primary unit power.
3. Crankcase and cooler heaters are wired into the control circuit so they are always operable as long as the control circuit power supply disconnect is on, even if any safety device is open, and the unit ON/OFF switch is in the OFF position.

4. Units have the following power wiring terminal blocks and parallel conductors:

| UNIT SIZE<br>30GTN,GTR,<br>GUN,GUR                           | VOLTAGE | TERMINAL<br>BLOCKS | PARALLEL<br>CONDUCTORS       |
|--|---------|--------------------|------------------------------|
| <b>040 to 070</b>  | 208/230 | 1                  | 3 (040, 045),<br>6 (050-070) |
|  | 460     | 1                  | 3                            |
|  | 575     | 1                  | 3                            |
|  | 380     | 1                  | 3                            |
| <b>080 to 110<br/>230B to 315B</b>                           | 380/415 | 1                  | 3                            |
|  | 208/230 | 1                  | 6                            |
|  | 460     | 1                  | 3                            |
|  | 575     | 1                  | 3                            |
| <b>130 to 210,<br/>230A to 315A<br/>330A/B to<br/>420A/B</b> | 380     | 1                  | 3                            |
|  | 380/415 | 1                  | 3                            |
|  | 208/230 | 3                  | 9                            |
|  | 460     | 2                  | 6                            |
|  | 575     | 2                  | 6                            |
|  | 380     | 2                  | 6                            |
|  | 380/415 | 2                  | 6                            |
|  |         | 2                  | 6                            |

5. Maximum incoming wire size for each terminal block is 500 kcmil.
6. Power draw control circuits include both crankcase heaters and cooler heaters (where used). Each compressor has a crankcase heater which draws 180 watts of power.

Units ordered with cooler heater option have 2 (040-050), 4 (060,070), or 8 (080-420) cooler heaters, 210 watts each.

### Step 6 — Install Factory-Supplied Sound Reduction Option

— This option is a specially designed system of fans and acoustic enclosures for reducing system noise without compromising unit performance. No fan motor change is required, and the system is compatible with the Motormaster® III control. Shipped from the factory are the following:

- Sheet metal stacks (amount varies with size of unit)
- (28) no. 10 <sup>3</sup>/<sub>4</sub>-in. Screws
- (4) <sup>1</sup>/<sub>4</sub>-14 x <sup>5</sup>/<sub>8</sub>-in. screws per stack
- (4) upper and lower mounting tabs per stack, upper clips have (3) <sup>5</sup>/<sub>16</sub>-in. holes per tab, lower clips have (2) <sup>5</sup>/<sub>16</sub>-in. holes and (1) .20-in. hole.

Inspect the contents of each package for any missing or damaged parts. File a claim with the shipping company if any item is missing or damaged, and notify your Carrier representative.

1. Turn off power to unit before installing accessory. Remove the existing fan guards (see Fig. 26). Be sure to save the mounting screws and the fan guards for reinstallation on top of the acoustic enclosures after the enclosures are installed on the fan deck.
2. Roll each sheet metal piece into a cylinder shape, line up clearance holes on the outside. Secure the ends with the no. 10 screws provided.
3. Attach (4) upper and (4) lower mounting clips to the stack assembly using no. <sup>3</sup>/<sub>4</sub>-in screws.

### ⚠ CAUTION

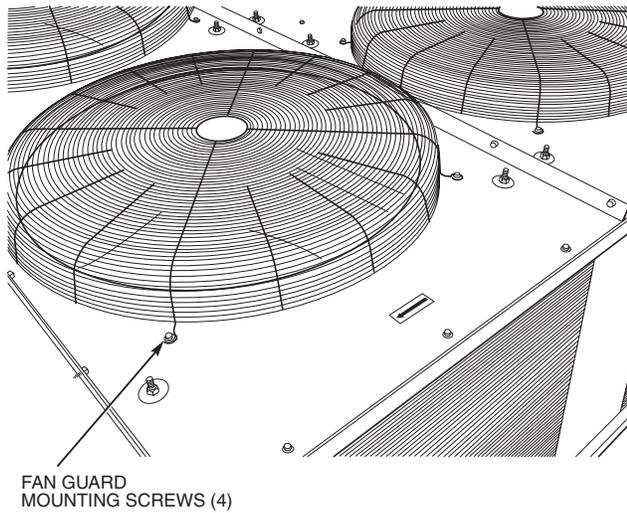

To avoid possible damage to accessory components, do not remove them from the packaging until they are ready to be installed. DO NOT stack anything on top of the fan propellers; damaging the propellers can cause fan imbalance.

When the accessory sound reduction kits are ready to be installed, carefully remove the accessory fan propellers and the acoustic enclosures from the packaging.

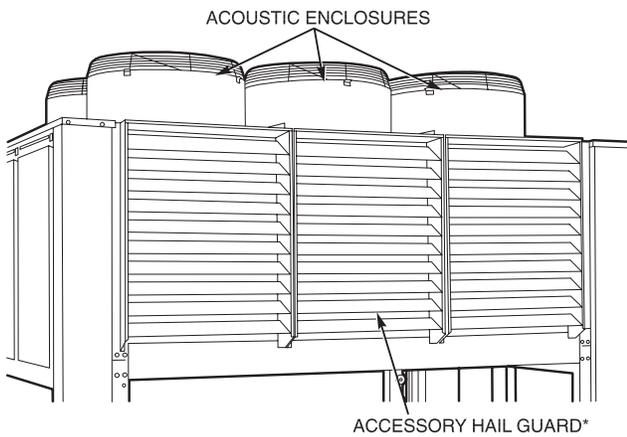

Mount the acoustic enclosures on the fan deck as follows:

**IMPORTANT:** When mounting the acoustic enclosures to the fan deck, be sure to use the 4 bottom mounting tabs with the larger screw holes. Use the 4 upper mounting tabs with the smaller screw holes for reinstallation of the fan guards removed in Step 2.

4. Position the 4 bottom mounting tabs over the screw holes left when the fan guards were removed in Step 2.
5. Install the 4 mounting screws (<sup>1</sup>/<sub>4</sub>-14 x <sup>5</sup>/<sub>8</sub>-in.) provided for each acoustic enclosure.
6. Using the screws removed in Step 2, reinstall the fan guards on top of the installed acoustic enclosures. See Fig. 27.
7. Restore power to the unit.

**Fig. 26 — Fan Guards**

\*Hail guard accessory is not required as part of sound reduction kit.

**Fig. 27 — Sound Reduction Kit Installed**

### Step 7 — Install Accessories

**ELECTRICAL** — A number of electrical accessories are available to provide the following optional features (for details, refer to the Controls, Start-Up, Operation, Service, and Troubleshooting book):

- Energy Management Module (used for any of the following types of temperature reset, demand limit and ice features):
  - 4 to 20 mA leaving fluid temperature reset (requires field-supplied 4 to 20 mA generator)
  - 4 to 20 mA cooling set point reset (requires field-supplied 4 to 20 mA generator)

- Discrete inputs for 2-step demand limit (requires field-supplied dry contacts)
- 4 to 20 mA demand limit (requires field-supplied 4 to 20 mA generator)
- Discrete input for Ice Done switch (requires field-supplied dry contacts)
- Chilled fluid flow switch/interlock
- Service option:
  - Provides hand-held, mobile capability display module with easy to read 4 line, Navigator display. Keypad function is the same as the standard display module. Features magnet for 'hands free' service of components.
  - Remote connection port includes cable and outlet for use of display module at most common service area.
  - Energy Management Module with features listed above.
  - GFCI (ground fault current interrupter) convenience outlet (60 Hz only).

**LOW-AMBIENT OPERATION** — If operating temperatures below 0° F (-18 C) are expected, refer to separate installation instructions for low-ambient operation, Motormaster® III control.

**HOT GAS BYPASS** — Hot gas bypass usually is *not* recommended because it results in application of equipment out of its normal design application range. However, if its use is required, the appropriate hot gas bypass package may be used. For installation details, refer to separate instructions supplied with the accessory package.

**MISCELLANEOUS ACCESSORIES** — For applications requiring special accessories, the following packages are available: condenser hail guard, gage panel, sound reduction kit, convenience outlet, and security grille package.

### Step 8 — Refrigerant Circuit

**LEAK TESTING** — Units are shipped with complete operating charge of refrigerant R-22 (30GTN,GTR) or R-134a (30GUN,GUR) (see Tables 2A-3B) and should be under sufficient pressure to conduct a leak test. If there is no pressure in the system, use standard refrigeration practices to search for the leak. Repair the leak using good refrigeration practices. After leaks are repaired, system must be evacuated and dehydrated prior to recharging with refrigerant.

**DEHYDRATION** — Refer to Carrier Standard Service Techniques Manual, Chapter 1, Refrigerants, Sections 6 and 7 for details. *Do not use compressor to evacuate system.*

**REFRIGERANT CHARGE** (Refer to Tables 2A-3B) — Immediately ahead of filter drier in each circuit is a factory-installed liquid line service valve. Each valve has a 1/4-in. Schrader connection for charging liquid refrigerant.
